How Does Scite Work?

## Smart Citations For Smart Research

Scite works with publishers to access full-text research articles and index the world's largest database of Smart Citations.

From each full-text article, Scite:

- Extracts Citation Statements, the sentences where references are used in-text
- Matches the references to each cited paper's DOI
- Determines the section (intro, discussion, etc.)
- Classifies the statement as **supporting**, **mentioning**, or **contrasting** the cited claims

This network of which papers said what about each other's findings is further enriched with information about authors, affiliations, topics, and more.

With Scite, you can search this information, configure alerts, build dashboards for reporting, and more. Reliably build a quantitative and qualitative view about individual papers, researchers, or areas of research.

Who Uses Scite?

- Undergraduate Students
- Graduate Students
- Seasoned Researchers
- Librarians
- Industry Scientists
- Journalists
- ... and anyone else who engages with research

There are over one million users across the world leveraging Scite already.
